## Satellite Image Classification using ANN

## Importing required libraries

```
In [ ]: import os
    from PIL import Image
    import numpy as np
    from numpy import asarray
    import matplotlib.pyplot as plt
    import cv2
    from sklearn.model_selection import train_test_split

In [ ]: cl = {"cloudy":0, "desert":1, "green_area":2, "water":3}
    x = []
    y = []
```

## Converting Image to 28x28 pixel form

```
In [ ]: cloudy = 'data/cloudy/'
        for img in os.listdir(cloudy):
            img array = cv2.imread(os.path.join(cloudy,img), cv2.IMREAD GRAYSCALE)
            img_pil = Image.fromarray(img_array)
            img_28x28 = np.array(img_pil.resize((28, 28), Image.ANTIALIAS))
            x.append(img 28x28)
            y.append(cl["cloudy"])
        desert = 'data/desert/'
        for img in os.listdir(desert):
            img_array = cv2.imread(os.path.join(desert,img), cv2.IMREAD_GRAYSCALE)
            img pil = Image.fromarray(img array)
            img 28x28 = np.array(img pil.resize((28, 28), Image.ANTIALIAS))
            x.append(img 28x28)
            y.append(cl["desert"])
        green_area = 'data/green_area/'
        for img in os.listdir(green_area):
            img_array = cv2.imread(os.path.join(green_area,img), cv2.IMREAD_GRAYSCALE)
            img_pil = Image.fromarray(img_array)
            img 28x28 = np.array(img pil.resize((28, 28), Image.ANTIALIAS))
            x.append(img_28x28)
            y.append(cl["green_area"])
